CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB An antimicrobial agent includes silver-chloro complex salts and chloride, and further oxidizing agents such as sodium hypochlorite or sodium chlorite. As a result, it is possible to provide the antimicrobial agent having immediate and residual disinfecting and antimicrobial effects on bacteria and molds of a wide variety of species and capable of demonstrating instantaneous deodorizing effect. The antimicrobial agent includes the silver-chloro complex salts and chloride, and further a compound, for example, such as alcohols or surfactants, which has compatibility with a solvent such as water which dissolves the chloride. As a result, it is possible to provide the antimicrobial agent which can be used conveniently at the stored concentration, and which has immediate effect and cleansing ability without causing rust or deposition of salts in use. Further, the antimicrobial agent includes the silver-chloro complex salts, and chloride, for example, such as polyaluminium chloride or benzalkonium chloride, which has at least (I) a property capable of existing as a supersaturated aqueous solution in the presence of a crystal nucleus at least at room temperature for 24 hours or longer and (II) a property capable of being decomposed when dissolved in water.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

LN.CNT 2805  
AB A rinse-added fabric treatment composition having a rinse aid increases  
the rinse capacity of an aqueous rinse bath solution for removing  
laundry residue from laundered fabrics. When properly diluted in water,  
the rinse-added fabric treatment composition provides a rinse bath  
solution having a rinsing capacity of greater than 1. In addition, a  
rinse-added fabric treatment composition reduces the surfactant residue  
on a fabric, and includes from about 0.05% to about 10% of a residue  
reduction agent, a suds suppresser, and the balance adjunct ingredients.  
The residue reduction agent is selected from a cationic residue  
reduction agent, a zwitterionic residue reduction agent, and a  
combination thereof. Moreover, methods for reducing surfactant residue  
on fabric and a method for reducing the amount of water used in a  
rinsing step of a laundry process are included. A kit for improving the  
rinsing capacity of water includes a rinse-added fabric treatment  
composition and an instruction set.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Improved fabric bleaching and stain removal are achieved by use of a composition comprising a photoactivator and a cationic substance. The photoactivator is a porphine or a mono-, di-, tri-, or tetra-azaporphine, solubilized with anionic, nonionic and/or cationic substituent groups, and metal free or metallated with Zn(II), Ca(II), Cd(II), Mg(II), Sc(III), Al(III) or Sn(IV). The cationic substance is preferably one that, in a laundry bath, itself performs a desired function such as acting as fabric softener, electrostatic control agent, surfactant, or germicide.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.
